

## EADV Fostering Specialist Course Psycho Oncology Melanoma and Non Melanoma Skin Cancer

Starting from the participants needs the course will go through the last publications on the researches on psyche and melanoma or non-melanoma skin cancers: where are we?

Most dermatologists are uncomfortable when dealing with emotions during the announcement of bad news or during the evolution of the skin cancer. This course will help them to do it properly for the patient and to handle better the emotional reactions they can encounter. It will also give them more serenity doing it.

As denial is part of late diagnostic we will have a look to this defense mechanism and see how to manage patients using this coping strategy.

Finally what kind of psychological approach is useful for the patient and for the family? Starting from the literature we will examine those points and see how to better help our patients with skin cancer.
