DERMATOLOGY CLINIC

ATOPIC DERMATITIS IN PERSPECTIVE

Dear Colleague

Atopic dermatitis continues to pose numerous challenges in day-to-day practice. The development of optimal therapeutic regimens is frequently complicated by poor adherence. Rapid advances in the understanding of underlying pathology raise questions about how best to translate this insight into improved care.

Professors Thomas Bieber, Sakari Reitamo, and Alain Taïeb, in collaboration with International Medical Press, are hosting a series of 1.5-day atopic dermatitis workshops that will address the above topics and more. The workshops in November, December and January will share the experience of each Centre of Excellence.

The programme includes lectures, interactive case studies and roundtable discussion with patient and physician participation. Topics will cover:

- Pathophysiological considerations
- Overcoming barriers in clinical practice
- The psychological impact
- Identifying triggers and facilitating self-management
- Therapeutic approaches
- Improving adherence.

Please be aware that places are limited. A bursary will cover reasonable travel, meals and one night accommodation for each participant. Please visit www.dermclinic.intmedpress.com or email dermclinic@intmedpress.com to register your interest.

We look forward to meeting you at the Dermatology Clinic.

Programme Directors

THOMAS BIBER
